

FROM A PROFILE CYLINDER TO A WARED LOCK

Sometimes it makes sense to convert a mortice lock with profile cylinder hole to a warded key code.

For example, for interior doors without security requirements in a house or flat. On construction sites, warded locks score with their lower sensitivity to dust and dirt. The ABUS deadlock inserts are keyed alike. This means that multiple locks can be opened and locked with the same key. In addition to two keys, the scope of delivery includes a 70 mm screw for fixing the deadlock insert in the mortice lock.

Technologies

- Zinc die cast deadlock insert for easy conversion from profile cylinder to warded lock
- Two keys included
- Incl. 70mm screw
- All deadlock inserts are keyed alike with each other

Operation and use

- For converting mortice locks with profile cylinder holes to warded locks
- Ideal for use on construction sites etc.

Tips

- Replacement key not available separately

Technical data - Deadlock insert
