

Multi Pole Circuit Breaker Device E222

Seite 1 von 2

SAFETY AT WORK FOR ELECTRICIANS

In the case of multi-pole circuit breakers, the E222 lockout device acts as a maintenance lockout on the miniature circuit breaker and engages in the space between the respective switches, thus securing the Off position.

This prevents the circuit breaker rocker switches from being accidentally moved to the On position during maintenance work.

One to two padlocks can be attached to the E222 as a safety measure, also when using the Lockout-Tagout (LoTo) principle. With the lockout device, the circuit breaker remains in the Off position until it is released again.

Technologies

- High-quality materials: durable, resistant, non-conductive
- Easy to use with screw mechanism for secure (tool-free) mounting
- For up to two padlocks with up to 7 mm shackle diameter

Operation and use

- Securing multi-pole circuit breakers for maintenance
- For attachment of up to two padlocks

Multi Pole Circuit Breaker Device E222

Technical data - Multi Pole Circuit Breaker Device E222

Depth	28 mm
Max. Thickness of Bond Bridge	13 mm
Mounting Points	2
Weight	19 g
Width	31 mm
colour	rot
EAN	4003318997235
