

SAFETY ACROSS THE BOARD

Secure your windows with a security door bar that can be installed without drilling into the window.

A security door bar on the window creates a high level of security. But what if you are not allowed to damage the windows by drilling into them, e.g. if you live in rented accommodation? The square profile transom can be fitted without drilling into the window. It is suitable for almost all common window types. The visibility of the security door bar provides a high deterrent factor against potential burglars.

Technologies

- Securing handle and hinge side with only one product
- Lock without key, open with key
- Locking cell inconspicuously integrated into the lock body
- Burglary protection due to sturdy stainless steel square profile
- Including wall bracket for convenient storage
