

ALL VIDEO SURVEILLANCE IN ONE PLACE

With the Central Monitor Station (CMS) software, you can manage the video data of your ABUS recorders, including cameras and IP cameras in the network, clearly on your PC. System requirements: Windows 7 or higher.

Flexible surveillance from S to XL

From remote access to a recorder to the management of 256 devices and 1,024 cameras in one system with an easy-to-understand user interface.

High performance, simple operation, optimum overview

The clear user interface is intuitive to use (e.g. camera archives as time bars). Time is saved as snapshots can be taken directly from the live view. With the SMART search, motion events are found quickly.

Live view and playback, alarm manager

Up to 64 live cameras (16 playback channels) can be displayed on 4 monitors simultaneously (with video wall: up to 100 live cameras on 16 monitors). The alarm manager with pop-up function helps with handling this wealth of images, immediately displaying events (motion etc.). PTZ cameras can also be controlled via a keyboard (TVAC26010).

Use cases

ABUS CMS is used to operate several ABUS recorders and cameras in one system. At distributed locations and in a technology mix (IP, analogue HD). The scope of performance is also suitable for large systems such as in chain stores, shopping centres, monitoring stations, etc.

The latest software is available to download free of charge from www.abus.com/a and is included in the scope of delivery of all ABUS recorders.

Technologies

- PC software for managing ABUS recorders
- Live view and playback for up to 64 cameras on 4 monitors

ABUS CMS Software (Windows)

Art.-Nr. TVSW11001

Seite 2 von 2

-
- Integrated schedule management, event programming and log data evaluation
 - Graphical bar display of the camera archive with time bars for event and continuous record
 - Remote configuration for recorder programming
 - Simple data export via integrated download manager
 - Integrated alarm manager with pop-up function for immediate display and playback of suspicious events
 - Creation of snapshots directly from the live view
 - Creation and management of up to 50 users, with the option of individual configuration for each user
 - Smart search through recordings using motion detection so events can be found quickly
