SECURE CONTAINERS IN THE BEST POSSIBLE WAY

Tyres, complete wheels, pyrotechnics, tools and machinery are high-value goods that are stored in containers and require good security. The ConHasp GRANIT 215 is the first choice when it comes to protecting high-value assets.

The ConHasp hasp is made of hardened steel and is manufactured using a special welding process. All parts are corrosion-protected. The use of two solid bolts to fasten the container lock to the container creates a particularly robust connection. Container lock + padlock In combination with an 83/80HB100 padlock, the containers can be securely locked. As this padlock is supplied without a cylinder, it is possible to install a Scandinavian oval cylinder yourself and integrate the container lock into existing locking systems. Tested and approved

In combination with the padlock 83/80HB100, the hasp is tested and approved in accordance with the Swedish SSF standard 1051 (class 4).

Technologies

- Additional securing of goods in containers
- Locking of the two-part construction with 83/80HB100 padlock
- Made from hardened steel
- Processed using a special welding process for even greater security
- All parts protected against corrosion by special coating
- 83/80HB100: without cylinder
- SSF 1051(Class 4)-approved

Operation and use

- Fits the most common transportation and storage containers
- Can be fitted to old and new containers
- Secure locking only in combination with a suitable padlock (here the 83/80HB100 Rock)
