

131/140 GateSec™ Hasp

FOR CONSTRUCTION FENCE AND FACTORY GATE

Our GateSec 131/140 hasp has been designed to secure gates and fences with a round profile.

Protect fences and gates with round profiles from being broken open. Our GateSec 131/140 hasp has been designed for construction fences, mobile barriers or garden gates with a round profile. The rounded edges of the hasp and the hardened steel provide a high cutting resistance so that the hasp cannot be broken open easily. In addition, the 131/140 is specially coated, which means increased corrosion protection. In combination with one of our Diskus padlocks, this hasp is therefore a good choice to secure higher value assets or objects on construction sites and the like against theft and vandalism.

Technologies

- Solid, hardened steel with rolled-off edges for enormously high cutting resistance
- Eterna™ coating for extreme corrosion resistance
- Special eyelet shape to protect the shackle from the most common attack methods
- Can be mounted on both sides

Operation and use

- Protection of larger valuables / objects or in case of high theft risk
- For securing single and double leaf gates with round profiles as well as construction fences
- For use with a padlock
