

BORDO™ 6200K/120 + bracket SH

SECURE, PRACTICAL, FLEXIBLE

Lock your valuable bike not only securely, but also conveniently: with the BORDO 6200K, you can quickly find a suitable place to lock up your bike - even bulky objects can be used.

One reason for this is the large locking circumference of 94 cm, or even 127 cm - depending on the variant. Another reason is the flexibility of this folding lock, which is due to the rotatable lock body. This allows you to rotate the opening for the locking bar to where you need it.

To transport the lock, fold it up like a folding rule to a compact size. Then stow it in the lock holder supplied, which can be easily mounted on the bike frame. As a particularly practical feature, there is a compartment in the holder for storing the key, and the lock can be easily engaged in the holder by applying pressure to the bars - quickly and without pinching fingers. The holder of the Bordo 6200K/120 also has a storage compartment for an AirTag*. These allow the lock or bike to be tracked.

The 6200K/120 also has a transport position and a locking position. This means there are two insertion options in the lock body: the outer one is only suitable for transport while the inner one is for locking the lock.

The ABUS XPlus cylinder and the robust bars made of hardened steel with additional profiling ensure the high security of the BORDO 6200K, which is manufactured in Germany. Steel discs protect the rivets from attacks with saws. The bars are coated to protect the wheel from damage to the paintwork.

*AirTag is a trademark of Apple Inc., registered in the USA and other countries and regions.

Technologies

- Hard-as-steel resistance: bars made of hardened steel with plastic coating to protect against paint damage
- 360° rotatable lock body: allows more flexibility when locking
- Locking circumference 6200K/90: 94 cm
- Locking circumference 6200K/120: 127 cm
- ABUS XPlus cylinder: for extremely high protection against tampering, e.g. picking
- Transport and locking position: thanks to two insertion options in the lock body (only for 6200K/120)
- Key compartment: the holder offers a practical storage option for the key
- Storage compartment for tracker (only for 6200K/120): an AirTag* can be hidden in the holder
- Quality lock: Made in Germany
- Scope of delivery: Folding lock, 2 keys, lock holder

Use and application

- Very good protection for high theft risk – ABUS security level 13
- Recommended for securing high-value bikes
- When folded, the lock is compact and easy to transport

Tips

- The One Key option allows the production of keyed alike locks for opening several locks with the same key
